

FIREWALL MANAGEMENT SOLVED

Regain control of the firewall with FireMon[®], an innovative firewall management solution that empowers firewall administrators and security managers with the tools to manage change, clean up legacy policies, and comply with industry and local standards.

You Can't Secure What You Can't Manage

Your firewall configuration just changed. If you don't know when it happened, who did it, or why, you're already behind. Even if basic monitoring is in place, you still do not have all the information needed to ensure your firewalls are secure. Was the configuration change implemented correctly, or was it even an appropriate change to make? Does the firewall still comply with corporate regulations for access? It's hard to verify changes or ensure compliance while trying to meet a constant stream of access requests. It is even more difficult in an enterprise environment where policies with hundreds of rules and thousands of objects are deployed on firewalls across different networks. Yet, you're accountable for securing a firewall that you don't really have time to manage.

You can *only* secure what you can manage.

Managing Enterprise Firewalls with FireMon

Secure Passage's[®] FireMon offers an innovative approach to firewall management with three key capabilities:

- **Control Change** – Manage change with an automated change control process.
- **Improve Firewall Policies** – Understand and simplify your policies to make them more manageable.
- **Enforce Compliance** – Reduce costs with recurring, actionable reporting.

FireMon immediately raises the visibility of how devices are configured, when they change, and the impact of changes. FireMon collects configurations from firewalls, routers, switches and load balancers, creating a central point of access for reviewing and managing inventory and configurations. It notifies your team when a configuration changes and alerts security managers when device configurations fall outside of your security standard, allowing for quick and continuous correction. FireMon also provides the tools to investigate and clean up legacy policies.

FireMon is Proven, Powerful Firewall Management.

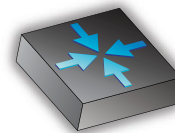

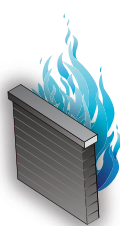

FIX YOUR FIREWALL

Control Changes

Clean Up Your Policy

Remove High-Risk
and Unused Rules

Understand "Any"
in Your Policy

CISCO • JUNIPER • CHECK POINT • CROSSBEAM • MCAFEE • NOKIA • F5

FIREMON®

Powerful Firewall Management

CONTROL CHANGE

- ▶ Gain insight into firewall changes
- ▶ Automate change process to increase efficiency
- ▶ Evolve from break/fix cycle

IMPROVE FIREWALL POLICIES

- ▶ Clean up unnecessary or inactive access
- ▶ Control policy size and complexity
- ▶ Increase lifespan of firewalls

ENFORCE COMPLIANCE

- ▶ Reduce cost of compliance
- ▶ Detect issues prior to audit
- ▶ Trend device compliance

We Are Secure Passage

As the leading provider of Security Analysis and Compliance solutions for firewalls, switches and routers, we now serve more than 300 global enterprise customers. Our partner network encompasses more than 75 technology and channel partners worldwide, and our flagship product FireMon supports

more than 35,000 distributed network devices from Cisco, Juniper, Check Point and McAfee. Nearly a decade after its introduction, FireMon remains the only solution that delivers the customization critical to unique audit and compliance reporting requirements.
